Aluminium cover

KÖMMERLING®

Open to new *perspectives*

New design potential is created between the desirable and the feasible. The new profile generation KÖMMERLING 88*plus* opens up an expansive potential for creative, and economical design solutions. KÖMMERLING 88*plus* – your new freedom for realising your own ideas with consummate ease.

Can aluminium be used for practical, low energy designs?

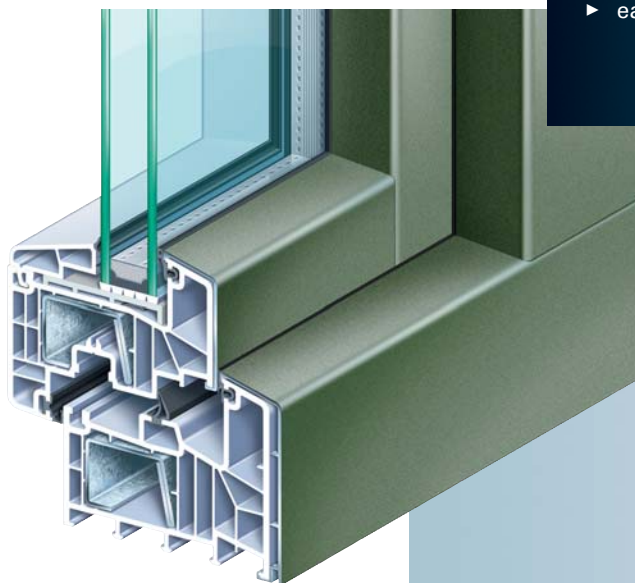

For slender and elegant looks and flexible colour schemes, KÖMMERLING 88*plus* profiles with aluminium covers offer a wide range of visual design potential. When your first thought on visual appeal turns to aluminium surfaces, KÖMMERLING 88*plus* with aluminium covers is worth a consideration. Here the specific advantages of modern PVC-U window systems can be utilised to the full: environmental compatibility and sound insulation, economic efficiency and recyclability. But above all the best possible thermal insulation – for a practical energy balance. Without a doubt the combination of aluminium and PVC-U presents its particular strengths here, especially for innovative and representative buildings.

KÖMMERLING has replaced lead with eco friendly calcium and zinc for its stabilisers – the first manufacturer to do so on the entire sector. Its consistent commitment to sustainability makes KÖMMERLING 88*plus* a safe investment in the future.

Powerful connection – convincing energy balance

The PVC-U window system with clip-on aluminium cover combines the advantages of both materials in the one structural element. On the outside, the aluminium cover offers almost limitless possibilities in colour design, whilst on the inside, PVC-U profiles ensure low maintenance, high dimensional stability, and reliable functionality.

- ▶ butt joined aluminium cover in the classical look
- ▶ outstanding thermal protection compared with aluminium windows
- ▶ aluminium look on the outside, neutral white on the inside
- ▶ anodised or powder coatings for virtually unlimited colour schemes on aluminium covers
- ▶ reduced draw on resources with aluminium
- ▶ easy care, long lived, and robust
